

## Canadian Wheat Board 2008 Survey Results Overview

The 2008 survey shows a continuing trend towards increased seeding of newer varieties. Some of the highlights of this year's survey are:

- Lillian and Harvest both increased their percentage of Canada Western Red Spring (CWRS) and are now the first and second most-seeded varieties in that class.
- The days of one or two dominant CWRS seem over as new varieties come on stream at a faster pace. This year, the top five varieties make up almost 60 per cent of the class -- expect this trend to a group of five dominant varieties to continue.
- Strongfield has increased its dominance of Canada Western Amber Durum, and now accounts for 51.8 per cent of seeded durum acres, up more than 10 per cent from last year.
- For two-malting barley, Metcalfe remains the top variety while CDC Copeland continues to increase in seeded acres. For six-row malting barley, Tradition increased its acreage by about 50 per cent and now accounts for 33.1 per cent of seeded acres, second to Legacy at 45.6 per cent.

### 2008 Percent of seeded acres by crop reporting district (Peace – Region 7)

<b>Canada Western Red Spring</b>	5602 HR	0.7
	AC Barrie	1.5
